Hiring Team

Remesh

Dear Hiring Team,

I am writing to express my interest in the Software Engineer position at Remesh. Your mission to help people truly understand each other through AI-powered conversation at scale resonates with me, and the opportunity to build features that turn real-time audience engagement into actionable insights is exactly the kind of meaningful product work I want to be doing. The combination of a 4-day work week, a small and focused team, and an AI-first development philosophy makes this role especially compelling.

I bring 8 years of professional software development experience, with deep proficiency in JavaScript, TypeScript, and React. Most recently at Dexian, I have been building and maintaining features for Pizza Hut's enterprise call center application using React, TypeScript, and Redux, collaborating within a cross-functional agile team of 10 to 15 engineers. I integrate with backend services via GraphQL APIs, conduct code reviews in GitLab, and consistently ship production-quality code on tight timelines. Before that, I spent seven years as a Front-End Web Developer at Acadiana Marketing Solutions, where I managed full project lifecycles from requirements gathering through deployment for more than 10 clients.

What sets me apart for this role is my hands-on experience with AI-assisted development tools. I actively use Claude Code and similar AI coding assistants in my daily workflow to accelerate development, debug complex issues, and generate well-structured code. I understand both the power and the limitations of these tools, which means I know when to lean on AI-generated output and when to apply critical thinking to refine it. This aligns directly with Remesh's AI-first development approach and your emphasis on strong reasoning skills alongside AI fluency.

I also bring intermediate Python experience and a solid foundation in unit testing and testing best practices, both of which are core requirements for this position. My background includes working with cloud platforms, RESTful and GraphQL APIs, and modern JavaScript frameworks. I am comfortable operating in fast-paced, startup-like environments where engineers are expected to own their domain while staying collaborative across the product and engineering organization.

I am excited about the prospect of contributing to Remesh's platform, especially as you integrate AI agents and agentic workflows into both the product and the development process. I would welcome the chance to discuss how my experience can help Remesh continue scaling its revolutionary communication platform.

Thank you for your time and consideration.

Sincerely,

Ricky Long
