PerfectServe Hiring Team

RE: Software Engineer, Full Stack AI (US-Remote)

Dear Hiring Team,

I am writing to express my interest in the Software Engineer, Full Stack AI role at PerfectServe. Your mission to accelerate speed to care by optimizing clinical communications resonates with me. Building software that directly impacts patient outcomes is exactly the kind of meaningful work I want to be doing. As a software engineer with production experience shipping features on enterprise platforms and a growing focus on AI-driven development, I am eager to bring my builder mentality to your R&D; organization.

Most recently, I served as a Software Engineer at Dexian, where I developed and maintained features for Pizza Hut's enterprise call center application, a production platform serving thousands of users daily. Working with React, TypeScript, Redux, and GraphQL, I delivered features and resolved defects within a cross-functional agile team of 10 to 15 engineers. This role sharpened my ability to ship reliably in a large-scale, fast-moving codebase while collaborating closely with backend services through GraphQL APIs. I conducted code reviews in GitLab, maintained technical documentation, and consistently balanced velocity with quality.

What excites me about this role is the emphasis on being a builder, not a researcher. I have been actively working with LLM APIs, including Anthropic's Claude and OpenAI, to build production tooling and automation systems. I have hands-on experience designing prompt architectures, integrating AI capabilities into user-facing workflows, and thinking critically about cost optimization, latency, and output quality. My data analysis background at Telephone Electronics Corporation, where I queried relational databases using SQL and transformed datasets into actionable reports, gives me a strong foundation for the data pipeline and evaluation work this role demands.

I also bring experience operating in environments where precision matters. Enterprise call center software and data reporting workflows both require careful attention to data integrity, security constraints, and cross-team coordination. Those skills translate directly to the regulated healthcare environment PerfectServe operates in. My background as a Software Development Instructor further demonstrates my ability to communicate complex technical concepts clearly, which aligns with the executive communication and cross-functional advisory responsibilities outlined in this role.

PerfectServe's position as the clear leader in the Gartner Magic Quadrant for Clinical Communication and Collaboration tells me this is a company that executes at the highest level. I

want to contribute to that trajectory by helping define AI architecture standards, shipping production AI features, and establishing the governance frameworks that will let PerfectServe scale its AI capabilities responsibly. I am confident that my combination of production engineering experience, AI-first development approach, and builder mindset makes me a strong fit for this team.

Thank you for considering my application. I would welcome the opportunity to discuss how my experience and enthusiasm for AI-powered healthcare solutions can contribute to PerfectServe's continued success.

Sincerely,

Ricky Long
